ABSTRACT OF THE DISCLOSURE

An image data processing system comprising;

an image inputting section for inputting image data;

an image processing section that performs image

5   processing on the input image data to create image data for

printing;

a first controlling section that performs controls over said

image inputting section and said image processing section; and

an image transmitting section capable of simultaneously

10   transmitting said image data for printing to a print preparing

device and to an image storing device, characterized in that

said image storing device includes;

an image receiving section that receives said image data

for printing that are transmitted from said image transmitting

15   section; a storing medium for storing the received image data;

and

a second controlling section that performs controls over

said image receiving section and said storing medium.
